

WaterMark
Certificate No.: 23448
AS 3497:2021

COMPONENTS

5 YEARS WARRANTY

SPECIFICATIONS

Operating Pressure: 240-600 kPa
Operating Temperature: 5-35°C
Connects To: 1/2" Cold Water Line
Membrane Flow Rate: 16 L/h
System Outflow Rate: 3 LPM

430 H x 360 W x 200 D mm

If a higher capacity is required, you can upgrade your 12 L Tank to a 18 L Tank for only \$50.
18 L Tank Dimensions: 279 D x 368 H mm
(The 18 L Tank holds up to 13 Litres)

The tank fills up with water coming from the membrane at a flow rate of 16 L/h* dependant on water pressure. This tank allows you to have up to 150 litres of water instantly* dependant on tank capacity.

If height is an issue, the system and tank can go laying down.

AquaCo Compact Reverse Osmosis System

\$695*

For customers looking for a 100% fluoride and hardness removal as well as sweet tasting water (Bottled-Like Water).

The whole house water filter will work as the pre-filtration stages that a regular reverse osmosis needs.

Therefore, the whole house water filter replaces the first and second stage in a regular reverse osmosis. As a result, the Compact Reverse osmosis is assembled with 3 stages only, or core components; carbon filter, membrane and alkalising filter.

The final stage in the compact reverse osmosis will effectively raise pH levels and produce antioxidant and oxygenating qualities. The final result is pure sweet-tasting water.

Installed with Whole House Water Filters

Our NEW Faucets feature an LED indicator that turns from blue to red after one year, serving as a reminder that it's time to replace your filters.

FILTRATION STAGES

1st Stage: Inline Carbon Pre-Filter. Coconut Shell Activated Carbon Media. Removes Chlorine, Taste, Odour, Colour and VOCs. Protects the membrane from Chlorine and Ammonia which can damage the membrane. Also, removes THMs, TCEs, Pesticides, Disinfectants and other Organic Pollutants.

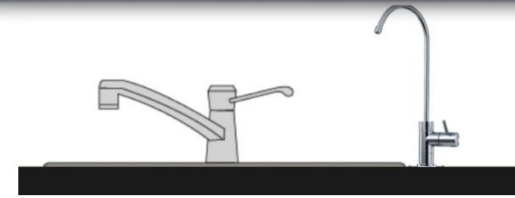

2nd Stage: RO Membrane. Ultrafine Membrane for rejection to all salts, inorganic molecules, as well as organic molecules. The pore size is less than 0.0005 micron (human hair is 70 microns).

3rd Stage: Inline Alkalising/Mineralising Filter. The mineralising and alkalising filter, successfully raises the pH levels producing antioxidant and oxygenating qualities. Adds minerals such as Calcium, Magnesium and Potassium.

INSTALLATION

The installation price of the Compact Reverse Osmosis is included with the installation of the Whole House Water Filter. Otherwise, the installation price for the Compact Reverse Osmosis system starts at \$199* (prices may vary depending on location).

If drilling through stone is required, an additional \$50 will be charged for the diamond drill bit and insurance fee.

Our systems are installed under your existing kitchen bench and are **supplied with a chrome faucet** for your filtered drinking water and a 12 L Reverse Osmosis Tank, which holds up to 9 Litres.
12 L Tank Dimensions: 244 D x 366 H mm

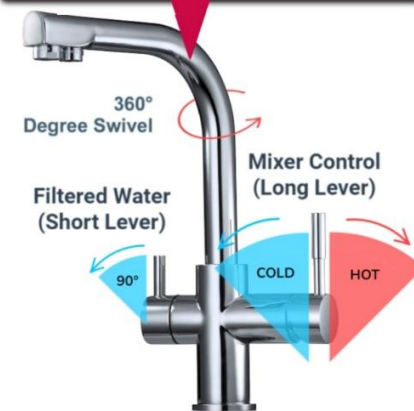

Alkaline Water

If your water pressure is under 35 psi, you may be required to fit a booster pump for optimum performance of the system.

If you do not want a separate drinking faucet, you can upgrade your kitchen faucet and get a 3 Way Mixer Tap.

MAINTENANCE RO

1st Service
\$59*

2nd Service
\$154*

3rd Service
\$154*

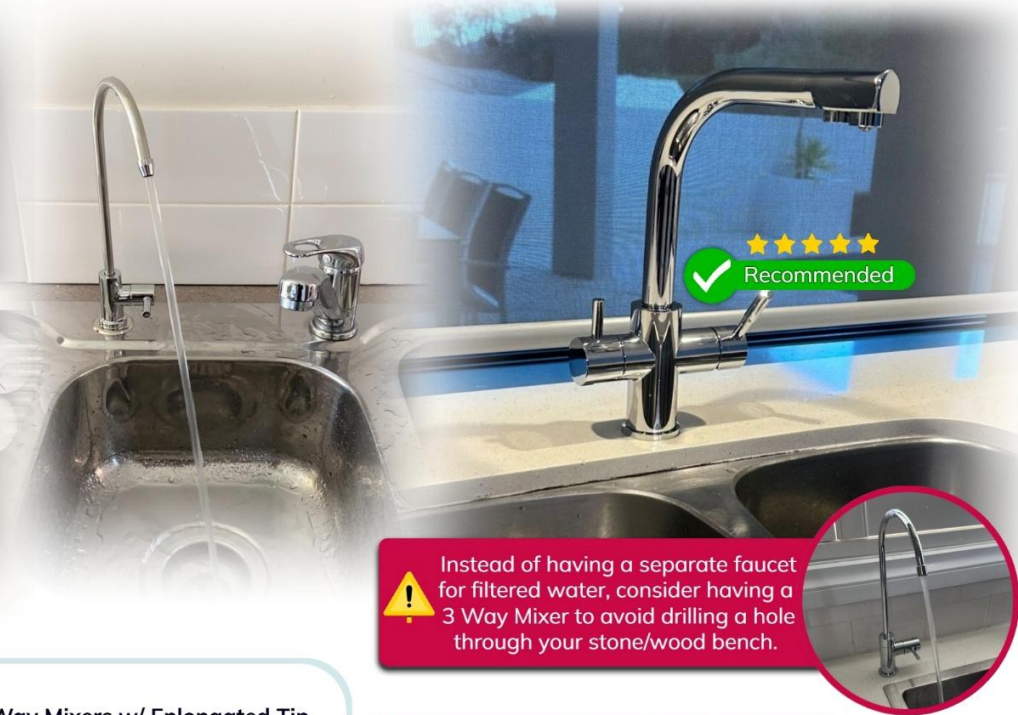

1st Stage: Carbon Filter (Every Year)
2nd Stage: Membrane (Every 2-3 Years)
3rd Stage: Alkalisating Filter (Every 2 Years)

Note: Replacement frequency also depends on water quality and usage.

★★★★★
Recommended

⚠ Instead of having a separate faucet for filtered water, consider having a 3 Way Mixer to avoid drilling a hole through your stone/wood bench.

UPGRADE TO 3 WAY MIXER

3 Way Mixers w/ Round Tip

Hot & Cold
Filtered

Note: In 3 Way Mixers, filtered water has an independent nozzle in the spout. Therefore, filtered and unfiltered water never mix.

3 Way Mixers w/ Elongated Tip

Filtered Hot & Cold

3 Way mixers have a long lever for hot and cold, and a short lever for only filtered water.

In 3 Way Mixers, there are separate tubes inside the faucet, so there's absolutely no mixing of sources.
